Blinds-Between-the-Glass

Select 1600 Series products are available with optional mini blinds-between-the-glass

The unique blinds-between-the-glass option offers a quality solution for window and sliding glass door treatments. The blinds are sealed between two panes of glass, resulting in a longer service life compared to standard blinds while also eliminating the need for dusting. Engineered for ease of use, the internal design makes raising and lowering the blinds simple and intuitive and eliminates the possibility of blinds obstructing the window or door operation.

PRODUCT FEATURES AND BENEFITS:

- Single operator makes it easy to lift and tilt the blinds for optimal sunlight
- Self-leveling bottom rail re-levels if blinds become unbalanced
- Blinds remain virtually dust-free in a sealed insulated glass unit
- Integral blinds eliminate the risk of children or pets getting entangled in cords

TECHNOLOGY:

- No-slip gear belt for smooth lift and tilt operation of the blind
- Single cord-winding shaft provides improved “stack,” which prevents the blinds from coming in contact with the glass surface

TESTED FOR DURABILITY:

- Rigorously tested at 290,000+ cycles, far exceeding industry standard of 3,500 cycles
- Durable components withstand long-term operation of window or door
- Integrated mini blinds are backed by an industry-leading 10-year limited warranty for added peace of mind
